Mobility in biometrics for border control is key – but does it work?

JENETRIC at a glance

Founded in 2014

Specialized in biometrics since 1997

Pioneers in TFT fingerprint scanners

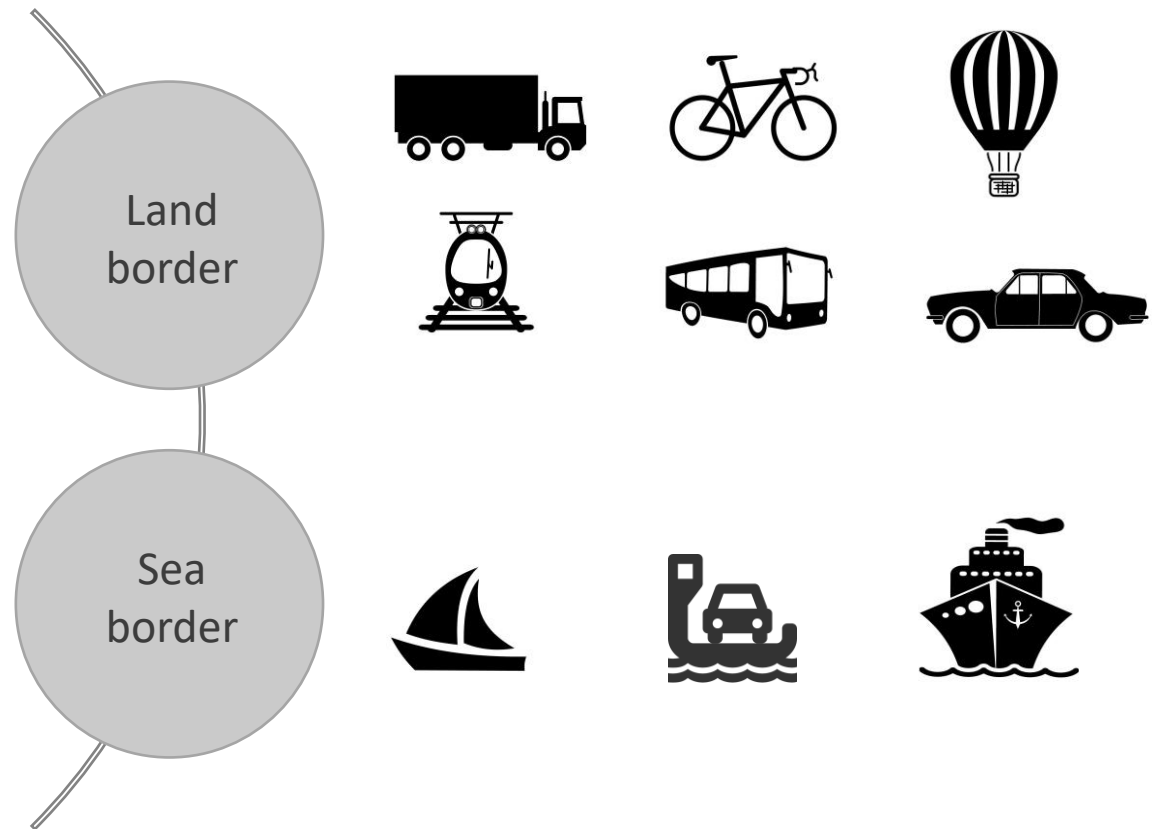

Production in Germany

ISO 9001 and ISO 14001 certified

Mobility in biometrics for border control is key – but does it work?

Mobile biometrics for EU external borders

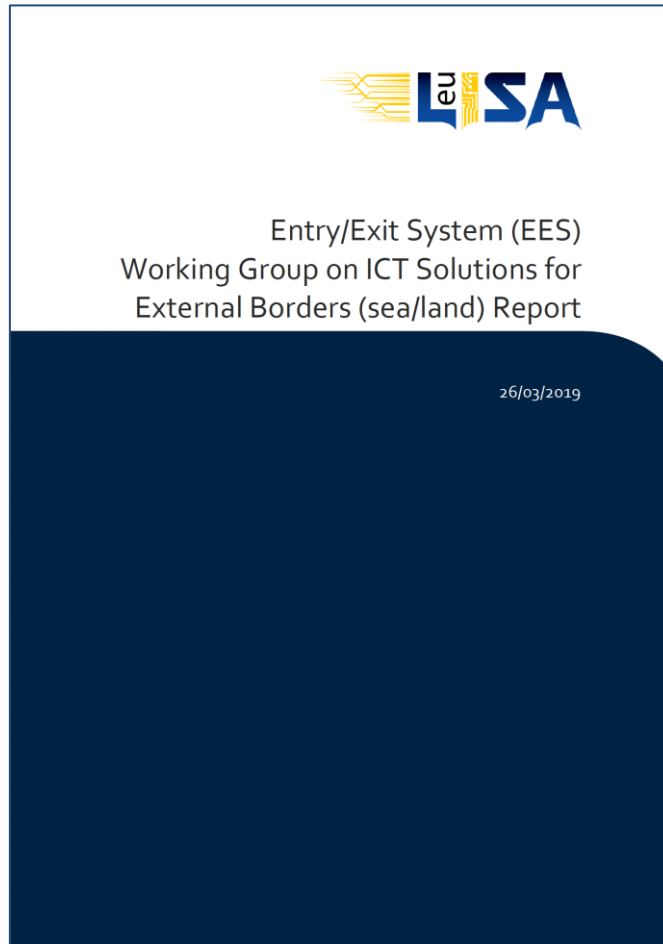

Challenges at land/sea borders compared to air borders

	Land border	Sea border
More difficult environment than on airports	x	x
Arrivals in batches and large groups		x
No pre-warning of travelers (API like)	x	(x)
Multi-passengers vehicle complicated controls	x	x (ferries)
Diversity of individuals (nationals, workers, tourists, truck drivers)	x	x (ferries)
Various crossing modes (pedestrians, cars, vans, buses, trains)	x	x (ferries)

Guidelines for mobile equipment for land and sea borders

The objective of the Working group is to facilitate a viable solution and a common architecture for the implementation of the EES at EU external sea and land borders.

Mobile biometrics kits - 10 years ago

- Big, heavy, bulky
- Stationary connected to PC/ Laptops
- External power supplies necessary
- Low mobile data bandwidth
- Many individual components

Today's 4-finger scanners: Just a piece of chocolate

Factor 19

Factor 13

Mobile fingerprinting using smart phones: Three main concepts

Custom made mobile devices

Pro:

Tailor made options, use case specific design, FBI certified FP scanner, no dependency on product cycles

Con:

Expensive, maintenance

Using a COTS smart phone with a fingerprint scanner

Pro:

Best in class phones, FBI certified fingerprint scanner

Con:

Dependency on COTS product cycle

Using a COTS smart phone only

Pro:

Best in class phones, no additional device/cable/wireless connection

Con:

New capture process, dependency on camera performance, no (yet) FBI certified FP sensor

Fingerprint scanner + Smartphone: Twice two options

Connection: Cable vs. wireless

Operation system

LIVETOUCH Flipcase: Smartphone + FAP 60 scanner

Phone and scanner connected

3

Ready to capture

LIVETOUCH Flipcase: How it works

Closed position

For storage and transportation

Open 60°

For mobile use

Open 90°

For stationary use

Mission accomplished? Technically yes – on the ground?

2012

2022

Equipment / device shall

- ✓ Be battery-powered
- ✓ Allow the border guard to remain freedom of movement
- ✓ Ensure capturing biometric data with the required level of quality
- ✓ Be easy & quick to set up and use

Embedded elements in the same device

- ✓ Camera with dedicated flashes
- ✓ Fingerprint scanner allowing capture of 4 fingers
- ✓ Lightening feature
- ✓ Screen to prevent readings by more persons than intended
- ✓ Include GPS to record exact position of the border check
